

# WOULD HUGHES ACCEPT IF NOMINATED? BIG QUESTION IN REPUBLICAN CAM.

Charles J. Hughes.

The movement to give Justice Charles E. Hughes of the United States supreme court the Republican presidential nomination is growing apace throughout the country. Many Republican observers declare that Hughes can have the nomination if he wants it. But there has been no indication thus far that Hughes will accept the nomination, even if he is the unanimous choice of the G. O. P. convention.

## CHANDLER ENTERS YOSEMITE IN DEAD OF WINTER; RECORD

Six Cylinder Machine Goes into Famous California Pleasure Ground with Much Snow on Ground.

The Chandler six has set a new kind of record. It is the first car to enter the Yosemite valley in the dead of winter. Word of this feat has just reached Chandler company. The performance is considered extraordinary in view of the deep snow.

On a Friday morning late in December, a party of four, including Mr. and Mrs. Frank A. Stanley of New York City, Mrs. Stanley's sister, Mrs. C. W. Tyron, also of New York, and Roy J. Nicol of San Francisco, owner and driver of the car, left the St. Francis Hotel, San Francisco, in a Chandler six for a trip into the Yosemite valley, via the Coulterville road.

"The total distance to Yosemite and return was exactly 500 miles," says the San Francisco Chronicle in telling the story of the tour. "No engine troubles or mechanical troubles of any kind were encountered either going or coming."

"The automobile making the journey was a Chandler type 16, seven-passenger touring car. Prior to this run the machine over 12,000 miles in a period of almost four months duration."

"During the 12,500 miles covered by the machine not one mechanical difficulty has been encountered either with engine or transmission, not one cent required for repair work, not a

spark plug changed. Upon the completion of the Yosemite trip, the motor was examined and found in perfect condition throughout.

## TAKE SALTS TO FLUSH KIDNEYS

Eat less meat if you feel backache or bladder troubles you—Salts is fine for kidneys.

Meat forms uric acid which excites and overworks the kidneys in their efforts to filter it from the system. Regular eaters of meat must flush the kidneys occasionally. You must relieve them like you relieve your bowels; removing all the acids, waste and poison, else you feel a dull misery in the kidney region, sharp pains in the back or sick headache, dizziness, your stomach sour, tongue is coated and when the weather is bad you have rheumatic twinges. The urine is cloudy, full of sediment; the channels often get irritated, obliging you to get up two or three times during the night.

To neutralize these irritating acids and flush off the body's urinous waste get about four ounces of Jad Salts from any pharmacy; take a tablespoonful in a glass of water before breakfast for a few days and your kidneys will then act fine and bladder disorders disappear. This famous salts is made from the acid of grapes and lemon juice, combined with lithia, and has been used for generations to clean and stimulate sluggish kidneys and stop bladder irritation. Jad Salts is inexpensive; harmless and makes a delightful effervescent lithia-water drink which millions of men and women take now and then, thus avoiding serious kidney and bladder diseases. ## PRISONERS ARE WELL CARED FOR WHEN IN RUSSIAN PRISONS

Treatment Compares Favorably with that Accorded to Prisoners in Any Other of Warring Countries.

PETROGRAD, Russia.—The treatment given to prisoners of war in Russia compares favorably with that accorded prisoners in other countries, says a correspondent of the Christian Science Monitor. Three were last autumn, full three-quarters of a million German, Austrian and Turkish prisoners in Russia. Probably by now the number is close upon 1,000,000. These are located all over the country, from Siberia in the north to Baku in the south. The Turkish prisoners whom I saw to the number of several thousand last June in an island camp near Baku seemed philosophically contented with their lot, which by no means an unsatisfactory one compared with the rigors of a winter campaign in the caucases. The food was plentiful, and the men loitered and lounged, played mysterious games, and disputed in true oriental fashion, and a condition of dolce far niente seemed to suit them exactly. In Odessa, Kiev, Nishni-Novgorod, and some of the other towns along the Volga, Austrian and German prisoners were lodged in large buildings, such as disused factories, while in many places, wooden barracks or sheds were specially engaged in building them themselves. Their food was precisely the same as that of the ordinary Russian soldier, that is, tschi, or good strong soup, with half a pound of meat and plenty of vegetables in it; a couple of pounds of whole meat bread and every other day a plentiful portion of kasha, or buckwheat porridge. I saw many wounded prisoners in hospitals in various parts of the country, and they were well cared for. Large numbers of prisoners were utilized in agricultural districts around Moscow and elsewhere in getting in the harvests and other field operations, and they were delighted as a rule to have the opportunity of doing such work. In return they received nominal payment which enabled them to augment their food with a few extras. The peasants people generally treated the working parties of prisoners kindly, for the Russian is naturally a human person despite a rough exterior.

There was some doubt as to the treatment of prisoners of war in such comparatively remote regions of Siberia. But when I returned to Petrograd last October a party of German nurses in the charge of Swedish and Danish Red Cross officers had been permitted by the Russian authorities to go into various parts of the country to inspect the prison camps and the accommodation for wounded German and Austrian prisoners. Members of the American Red Cross received similar permission, and those with whom I conversed seemed well satisfied with what they had seen, their recommendations as to necessary improvements having met with the ready acquiescence by the Russian authorities. Delegates of the Geneva Red Cross have also been permitted quite recently to go into Siberia in order to inspect the compounds and camps for prisoners of war and interned civilians. Favorable reports have been published from time to time on such inspections. But what has so far escaped reference is that many of the prisoners are so well pleased with their condition and with the prospects of the country that they are eager to stay on after the war. Many of the men are allowed a large amount of personal liberty, they have made friends among the people of the places where they are located in and have entered into relations with the women. Not only do the prisoners work on the farms, poultry establishments, dairies and butter factories, (or laborers is very scarce owing to so many men being withdrawn from the war, but they move about the towns and villages in almost complete liberty.

AMERICAN TOBACCO ORDER  
NEW YORK, April 8.—An order for 20,000,000 pounds of American tobacco for delivery to European governments, principally France and Italy, was explained here today by the firm of Gaston, Wildman & Wigmore. The order is said to be the largest of its kind ever placed in this country.

## COMB SAGE TEA INTO GRAY HAIR

Ladies! Try This! Darken beautifully and nobody can tell—Brings back its gloss and youthfulness.

Common garden sage brewed into a heavy tea, with sulphur and alcohol added, will turn gray, streaked and faded hair beautifully dark and luxuriant. Mixing the Sage Tea and Sulphur recipe at home, though, is troublesome.

An easier way is to get the ready-to-use preparation improved by the addition of other ingredients, costing about 50 cents a large bottle, at drug stores, known as "Wyeth's Sage and Sulphur Compound," thus avoiding a lot of muss.

While gray, faded hair is not sinful, we all desire to retain our youthful appearance and attractiveness. By darkening your hair with Wyeth's Sage and Sulphur Compound, no one can tell, because it does so naturally, so evenly. You just dampen a sponge or soft brush with it and draw this through your hair, taking one small strand at a time; by morning all gray hairs have disappeared. After another application or two your hair becomes beautifully dark, glossy, soft and luxuriant and you appear years younger. Wyeth's Sage and Sulphur Compound is a delightful toilet requisite. It is not intended for the cure, cure, mitigation or prevention of disease. (Advertisement.)

## RICH VEIN IN CROSS- CUT OF U. WESTERN

(Continued From Page One.)  
there is greater activity in that region than for more than twenty years. The Tennessee mine of the Needles Mining and Milling company, a subsidiary of the United States Smelting, Refining and Mining company, is largely responsible for the attention that Chloride is receiving, being the principal producer of that camp. For several months the monthly gross production of the mine has hovered around the \$550,000 mark. The new body of silver-bearing ore opened up in the mine is responding splendidly to exploration and gives every evidence of maintaining its present rate of production for some time to come.

Not only at Chloride but in all the various other camps to the south of it in the Cerbat range of mountains, operations are steadily increasing and the results being obtained augur well for the future of the entire district. One of the latest corporations to become identified with the district is the Keystone Consolidated Mines company, the officers of which are: President, G. S. Holmes of Salt Lake City; vice-president, W. O. Kay of Salt Lake City; treasurer, John Pingree of Ogden, Utah; secretary, T. H. Fitzgerald of Salt Lake City; directors, the above named with Charles R. Green of Los Angeles. The new company has taken over and resumed the development of the Keystone mine, one of the famous properties at Mineral Park. Former owners sunk a vertical shaft on the property to a depth of 260 feet and opened up a large tonnage of good ore. It is estimated that the dump on the property contains 1200 tons of ore that will return an excellent profit. It is announced that a concentrating mill will be erected on the property in the near future. Mr. Holmes, president of the new company, and associates are also operating the Midnight mine at Chloride, and with highly pleasing results.

Secret Pass Section.  
Charles S. Sprague and J. K. Turner president and consulting engineer respectively, of the Jumbo Extension Mining company of Goldfield, Nevada, and J. P. Loftus, who was prominently identified with that camp in its boom days, recently closed a deal with James A. Warner for his Orphan property in the Secret Pass section of the Oatman or San Francisco district and are at present organizing a company for its development upon an extensive scale. Considerable attention has been attracted of late by the property through the success of leasers' operations, bullion valued in excess of \$4,000 having resulted from the treatment of ore in a two-stamp mill in runs aggregating not more than 400 hours. A sample taken across 26 feet of the big ledge traversing the property recently gave an assay return of \$8.25 per ton. In sections of the ledge considerable high grade ore is found.

Cedar Valley  
The famous Diamond Joe mine in the Cedar Valley district, about 60 miles southeast of Kingman, which returned handsome profits more than twenty years ago when transportation and treatment charges aggregated \$80 per ton, shipments being made to the Pueblo, Col., smelter, has been sold by Manuel Martinez, its original locator, and J. R. Russell of Kingman and Miss Flora Lewis of Yucca, Ariz., to Francis E. Wilkinson of San Francisco, and associates. The old property will be reopened immediately and operated on a large scale.

Maynard District.  
What is believed to be the mother lode of the Wallapai range of mountains has recently been exposed by shallow surface cuts on the property of the Telluride Chief Mining company in the Maynard district, about 15 miles southeast of Kingman, with neither wall disclosed, nine feet of the ledge, assays \$5 in gold and silver and 10 percent copper. Since its discovery the ledge has been traced for more than 4,000 feet.

## ASSURANCE IS FELT ON COPPER SITUATION

(Continued From Page One.)

attainment of the production by all of the copper smelters in the country, this accounting for the low production of one year ago. In April and May production was again advisable and since then the C. & A. has been steadily increasing its output, until now it has reached the extreme maximum. The production at the C. Q. smelter for March was about what it was when the figures were 13,500,000 pounds. This includes the concentrates of the Nacozari Copper company and all customs ores from every source.

Concerning the copper situation, the Boston Financial News says in a recent issue:

"The general weakness in the stock market during the past week has extended to the copper shares, which have been dull and have declined to some degree, although not heavily. There has been little pressure to sell, but buyers have been content to pick up what stocks have been offered without bidding prices up. There has been steady accumulation in many of the good coppers. Earnings are running unprecedently high, and there is every incentive to purchase and to hold the coppers."

The failure of the copper companies to increase their dividend rates to a like extent with the increase in earnings is alleged by some traders to indicate that the situation is less favorable than is claimed. On the contrary it indicates a very strong position. If the insiders desired to encourage public buying they would increase their dividend distributions and would do everything possible to impress the public with the strength of the situation. Evidently they do not want to

induce public buying at this level.

"As we have stated before, there are large plans pending in the copper industry, and the market is being held back until these are ready for announcement. The big interests will not waste their ammunition but will hold it until it becomes more effective. With the announcement of consolidations and absorption figures of the earnings of these companies will be made public, and increased dividends will be declared."

The technical position of the copper shares never was better. The speculative holdings are comparatively small, and these are well protected, so that commission houses have little to do in the way of adjusting shares' margins on copper shares."

"It is probable that in New York the speculative public is more interested in the coppers than is the local public, as the coppers have been more active in that market recently. At the same time the best information is that there are few weak accounts, and that it would take a severe break in the market to force out any appreciable volume of coppers. Such a break is scarcely probable under the present conditions."

Boston retains a memory of a real copper share market, when commission houses were days behind in their work, although clerks were working well into the night. In those days it was necessary only to buy copper shares; it was of comparatively little importance which issues were purchased, as all went up together.

"Conditions at that time were far less favorable for a big full market than they are at present, and when some of the present uncertainties have been relieved, there is good reason to anticipate a copper share market that will exceed even the memories of the past."

If the public fails to make money it will be because it waits until the cream has been skimmed before buying, instead of purchasing now, before the movement is under way."

## BONANZA SILVER IS STRUCK IN TUSCUMBIA

(Continued from Page 1)  
other ores of that locality insure a continuity of veins and values and presage the discovery of deposits of commercial copper when the sulphide areas have been well penetrated. The Crown Kink mill, with its oil-fotation process, affords a nearby market for these ores at a low transportation cost.

Tuscumbia's Plans.  
"Now the presence of pay ore has been demonstrated in the Tuscumbia mine the company purposes to enter upon an extended campaign of development work. Plans to that end are being formulated and in due course will be in operation. The personnel of the company's directorate includes such well known local business and mining men as Frank H. Williams, city assessor and tax collector; B. H. Smith, former member and chairman of Yavapai county's board of supervisors, and J. H. Robinson, secretary of Arizona Chapter of the American Mining Congress. These men are familiar with the ore occurrences in the Bradshaws and will lend valuable assistance in the future development of the Tuscumbia property. As outlined, the plan is to prosecute development work in the high grade silver-copper ore sheet opened in tunnel No. 3 late in March and at the same time to sink the main-working shaft to connection therewith. This will afford an adequate circulation of air and make easily accessible an area of profitable stopping ground."

Shows Native Silver.  
"So far as determined the ore shoot is fifty feet in length and from four to five feet in width. The quartz along the footwall shows considerable native silver. The vein is strong and well-defined and is making into the lode porphyry. Persons who are familiar with the ore occurrences at Tonopah will grasp the significance of the fact last mentioned, as the veins in the lode porphyry there are the ones which carry the values. The vein in the Tuscumbia is well mineralized to the north and south of the high grade shoot, and at a point 500 feet in from the mouth of the tunnel samples \$55.22 in silver and 1.4 percent in copper to the ton. Vein and values are continuous in the tunnel and warrant sorting of the ore with a view to future shipments. We purpose to break ore for shipment in the high grade shoot just as soon as we have caught up a considerable area of caved ground, have installed the necessary mine appliances and cleared the workings of muck."

Rescue Prediction.  
"If the Tuscumbia mine, were in Tonopah the owners would have no trouble in either leasing or in disposing of the property outright at a good figure. I believe the mine will prove to be another Mizpah, and I will not be surprised if a camp is eventually established in the Bradshaw mountain of equal importance and richness to Tonopah."

Safe Medicine for Children.  
"Is it safe?" is the first question to be considered when buying cough medicine for children. Chamberlain's Cough Remedy has long been a favorite with mothers of young children as it contains no opium or other narcotic, and may be given to a child as confidently as to an adult. It is pleasant to take, too, which is of great importance when a medicine must be given to young children. This remedy is most effective in relieving coughs, colds and croup. Obtainable everywhere.
